

MANAGED SERVICES SOLUTIONS

personalizing business communications

WHAT ARE MANAGED SERVICES FROM PAETEC?

Your corporate IT staffs face the challenge of maintaining dozens of systems, many requiring 24-hour support. PAETEC's Managed Services let you focus on your organization's core objectives while we handle the management of your communications system and network infrastructure. Let PAETEC provide you with the latest feature-rich communications technology, using scalable solutions managed by us – all with limited or no additional capital expenditure!

WHAT KEY BUSINESS NEEDS CAN PAETEC'S MANAGED SERVICES ADDRESS?

“PAETEC provides us with excellent service, minimal downtime, and a very attractive price structure.”

Tom Kulzer
Founder & CEO
AWeber Communications

Provide Access to Corporate Resources from Multiple Locations

For most organizations, the days of everyone working in the same office every day are over. Our Managed Services will help your employees access your corporate systems and applications from virtually anywhere.

Secure Your Networks & Protect Your Data

Hackers and other external threats continue to grow in number and sophistication. Managed Services from PAETEC offer you the technology and expertise necessary to keep your networks safe.

Find an Effective Solution to Prevent Critical Equipment Failures

Disruptions in your communications system can have severe operational and financial consequences. PAETEC's Managed Services will help ensure that your critical equipment and applications remain up and running.

Upgrade Systems with a Limited Budget

Need a more robust communications system, but don't currently have the budget to support it? With our Managed Services, you can enjoy the latest functionality without a large capital expenditure.

WHAT SCALABLE SOLUTIONS MAKE UP PAETEC'S MANAGED SERVICES?

MPLS VPN SERVICE

An MPLS VPN (Multiprotocol Label Switching Virtual Private Network) from PAETEC will provide your employees with secure access to your corporate network, systems, and applications from virtually anywhere.

NETWORK & MANAGED CPE FIREWALL SERVICES

PAETEC's Network Firewall with Intrusion Detection and Prevention System (IDPS) and Managed CPE Firewall are advanced managed firewall solutions that offer a number of advantages, including a "defense in depth" layered technology solution for extra security to keep your networks safe.

COLOCATION SERVICES

PAETEC's Colocation Services allow you to house your critical equipment and applications in the same secure and controlled central office environment as PAETEC's own network equipment, offering optimal conditions in a highly secure, climate-controlled environment to ensure they always remain up and running.

DATA BACKUP & RECOVERY

PAETEC's Data Backup and Recovery solution offers your organization secure, automated off-site server backup performed on a daily basis. By letting PAETEC manage your critical data backup, you can rest assured that your data will be there when you need it.

DEDICATED HOSTED SERVER

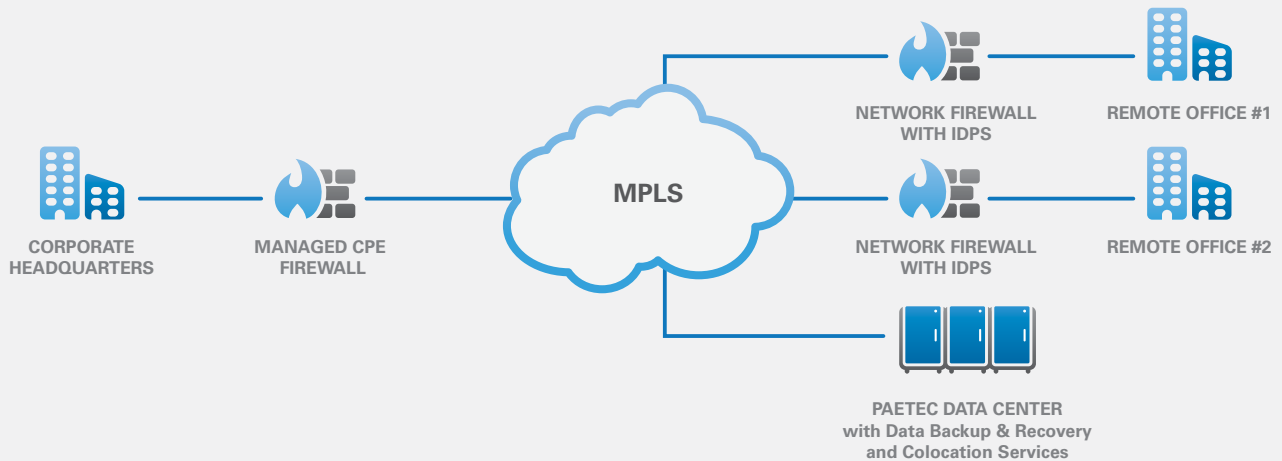

PAETEC's Dedicated Hosted Server solution not only provides your business with access to the latest servers, but also monitoring and management services that deliver a complete third-party solution.

MANAGED ROUTER SUPPORT SERVICES

No matter what your router is being used for – Internet services, VoIP (Voice over Internet Protocol), MPLS VPN, or another application, it is important to have the confidence that your data equipment is working properly. With PAETEC's Managed Router Support Services, you can choose from three different levels of professional configuration, maintenance, and monitoring for PAETEC-provided or approved customer-provided routers:

- Router Ping Monitoring
- Router Configuration
- Advanced Managed Router

HOW CAN PAETEC'S MANAGED SERVICES INTEGRATE WITH YOUR BUSINESS?

STAGE 1:

A Corporate Headquarters adds Managed CPE Firewall to a legacy device.

STAGE 2:

The company then opens Remote Office #1 and adds MPLS VPN between the Corporate Headquarters and Office #1. Network Firewall with IDPS is also added at Remote Office #1 to avoid additional costs / management of another router.

STAGE 3:

The company adds Data Backup and Recovery and Colocation Services out of a PAETEC Data Center. All services are delivered via MPLS VPN.

STAGE 4:

The company opens Remote Office #2 and adds MPLS VPN between the Corporate Headquarters and Office #2. Network Firewall with IDPS is also added at Remote Office #2 to avoid additional costs / management of another router.

WHY CHOOSE PAETEC'S MANAGED SERVICES SOLUTIONS FOR YOUR BUSINESS?

- Free up employee resources so you can focus on your core objectives
- Enable your business to adopt advanced technology – all with limited or no additional capital expenditure
- Acquire a personalized communications solution to meet the unique needs of your organization with help from our knowledgeable account consultants
