

Product Overview

PAETEC's Central Office Colocation

Key Facts:

- Central Office Colocation provides a secure, local environment for the housing of customer equipment
- More than 84 available locations
- Affordable network access from the switch site
- No "local loop" required

What is Central Office Colocation?

PAETEC's Central Office Colocation allows our customers the ability to place their voice and data services equipment within a PAETEC Central Office facility, providing a secure and managed environment for continuous connectivity. With environmental controls and measured power, customers can collocate their equipment closer to the network, within a safe facility for a cost-effective communications deployment and more scaleable access availability.

PAETEC's Central Office Colocation includes:

- Secure facility for the placement of customer owned and operated CPE
- Backup power
- Optional cabinet, half cabinet, or open relay rack (where available)
- Business-hour access
- Affordable network access with no local loop

Solution Features & Benefits:

Measured Environment

The customer's equipment is kept under regulated and monitored heating, air conditioning, and humidity environmental controls. Their CPE is always secure in an optimal environment.

Measured Power

Standard and customized power configurations are available to meet traditional or unique CPE power requirements.

Network Access

Secure, convenient, and economical network access in variable bandwidth configurations provides incremental, scalable growth as required.
